SUMMARY

My name is Sajjad Abdollahi from Iran , a developer with an experience of building applications in agile environments, such as Scrum. My experience involves building scalable server side web apps using frameworks like Laravel .

- More Than 10 Years of Experience in Software & Web Developement
- Architected and developed back-end and front-end for Online Shops.
- Acted as lead developer managing a team to write enterprise grade PHP Laravel code.
- Designed architecture of more than 12 high end applications.

TECHNICAL SKILLS

- PHP , Laravel , Livewire
- Databases , MySQL , Sqlite , Tinker
- HTML , CSS , Tailwind
- Javascript , Alpine
- Git , Docker , Devops

SOFT SKILLS

- Teamwork , Creativity , Communication , Leadership , Adaptability , Attention to detail

EDUCATION

- **University Of Mazandaran** Babolsar, Mazandaran, Iran
Bachelor of Software Engineering 2010 – 2013
- **Azad University of Neka** Neka, Mazandaran, Iran
Bachelor of Software Engineering 2017 – 2020
 - the main project was about watchman route problem that is about the smallest routing path a watchman should go to see all the space on the room , the accuracy of my program was about 98% in different scenarios – the code is available on my github : <https://github.com/sajjadabd>

EXPERIENCE

- **Online Shop** Mazandaran, Iran
Backend Developer May 2018 - Present

Laravel and Livewire are great pair for designing the architecture of the website that fully qualified for ajax behaviour and REST APIs

- developing well-organized, maintainable, object-oriented, unit-tested code
- developing highly scalable and composable RESTful APIs
- **MVC Architecture**: use models and controllers to handle the logics of the whole system
- Maintenance of existing infrastructure

Technologies

- **Artisan**: use php artisan utility command to migrate database tables
- **Sanctum**: Authentication and authorization standards such as Sanctum, OAuth
- **Tailwindcss**: create beautiful user interface
- **Composer**: using composer to install third party packages
- **Notifications**: Service for sending email, push and in-app notifications. Involved in features such as delivery time optimization, tracking, queuing and testing.
- **Eloquent**: make models to have more readable and maintainable code and boost the performance and scale the application easier .

Achievements

- **In App Billing**: Implementing money payments for the application
- **Authentication**: send sms to verify that the registration request is for right person
- Clean Code written

• CRM Project

PHP Laravel Developer

Mazandaran, Iran

Jan 2016 - Oct 2018

a System for organizing your interactions with your loved ones. a CRM for your friends , family and customers

- Add and manage contacts and Define relationships between them
- Upload documents and photos and add notes for a contact

Technologies

- **Blade** for template engine
- **Validating request** sanitize and trim data to secure the server-side and database transactions and improve the security of the requests by 80%
- Developed RESTful API for mobile applications and web applications using Laravel
- use **job** and **queue** and schedule them to serve the light and fast server response
- **Dev Environment**: Development environment based on docker , standardized and require the PHP and Laravel dependencies. manage the core libraries that are shared by others.
- **Laravel Testing**: write unit and functional tests, we make sure that page response status codes are correct and each component is visible in their belong pages .
- **Database Seeding**: with factories and seeding database it is easier to layout your website with ready to serve json data from server to your front-end and increase the speed of coding by 30%
- **Livewire**: add items to your cart without reloading the web page , sync every action you do on the front side with back-end of the same component on the server , it makes every user interaction more joyful to the customer and also reduce amount of javascript code written by 80%
- Writing custom PHP packages

Achievements

- **GIT** as my version control system
- **Laravel voyager** to make custom admin panel for management
- Managed 500+ customer accounts with the least complaints in 2 years and with 90% customer rating in online surveys.

• Chatbox
